

How to make an Extended Body

Step by Step

Materials needed

Poly dubbing
Needle large sewing
Thinned goop

Step 1.

Start by wrapping
a needle with
dubbing.

Smoothing and
shaping as you
work

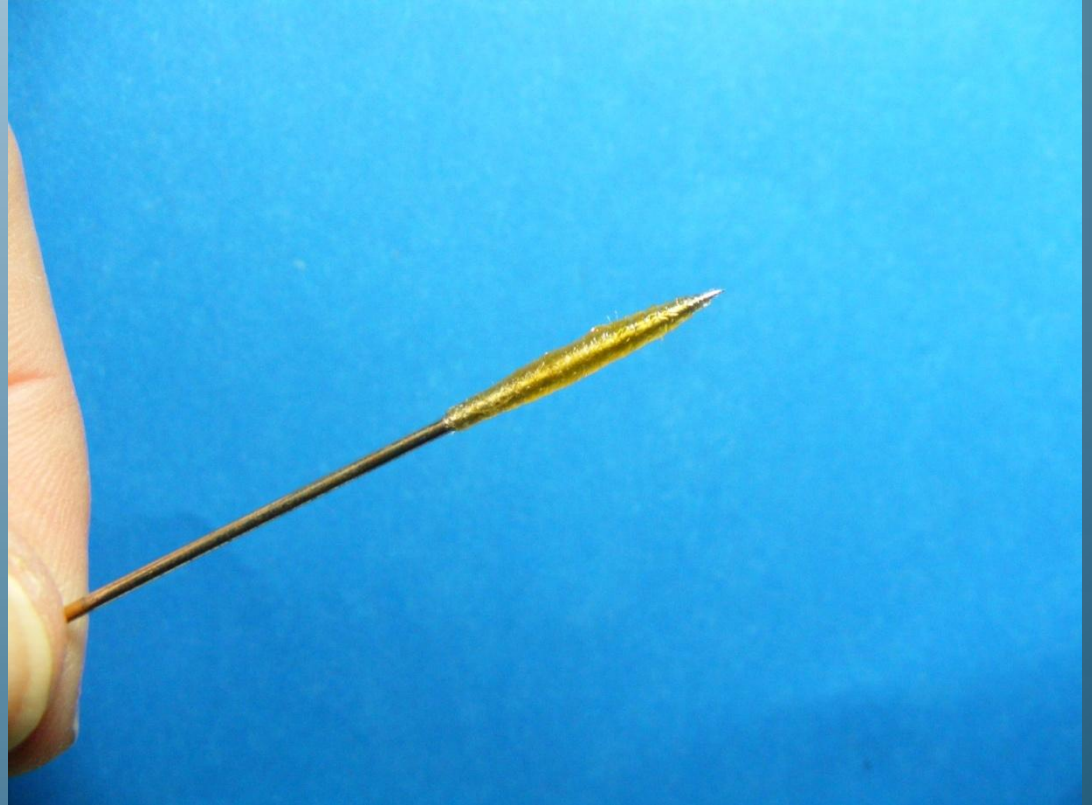

Step 2

**Keep adding material
till you get the shape
you like**

Step 3

Now coat the body with thinned goop. I roll it between my fingers to get a smooth body.

Step 4

Carefully slide the body off of the needle and lay aside to dry. This is all there is to making a extended body.

Step 6

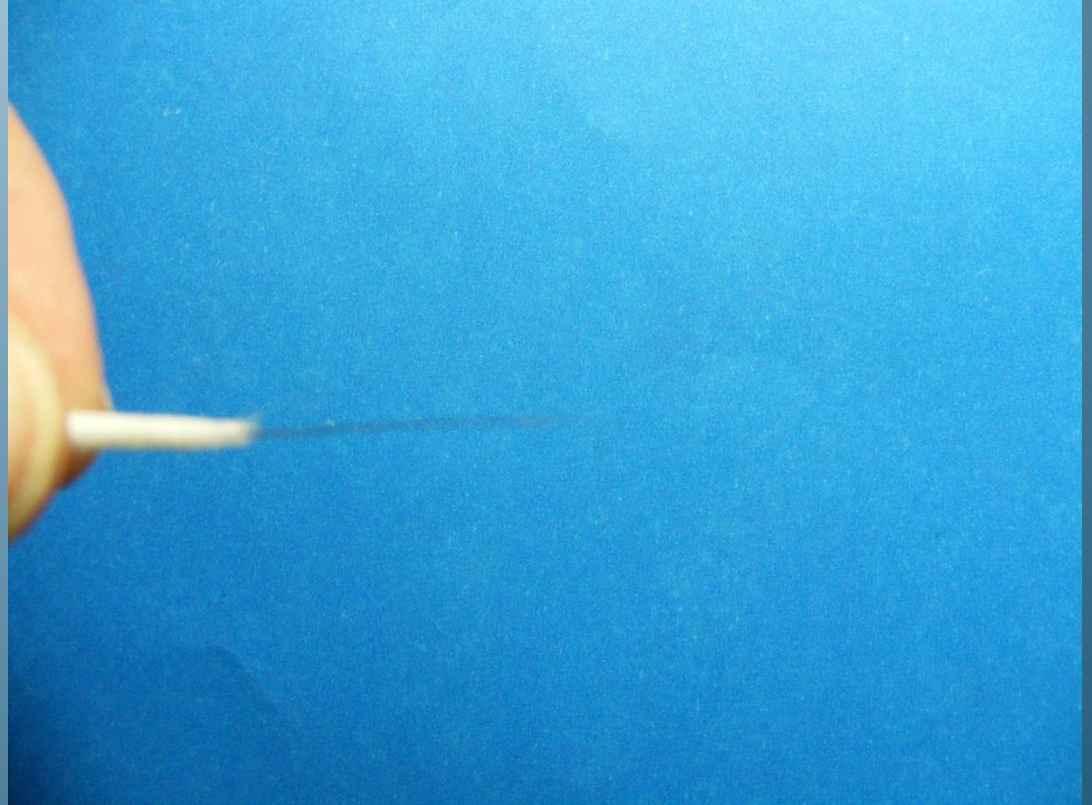

Adding the tails.

I use either moose mane, moose body or porky pine guard hairs on the extended body flies.

Step 7

**Carefully insert
your tail material
into the extended
body, doing one at
a time works the
best.**

Step 8

After you have your tails inserted into the body place a small amount of thinned goop to the base of the tails to hold them in place.

That's it you have made a extended body.
